

## *Printing of standard compliant labels easy and comfortable*

### General

TTE-Printing is a simply and very efficient printing solution for all required labels.

It connects the requirements of the EU-identification directives with all FEEM recommendations on the identification of explosives.

The aim is, to provide the user with a simple, flexible solution that complies with the directives, which allows the user to create and print fast and easily all required labels.

The solution ranges over all packaging levels and forms automatically the correlation between the individual items and their higher packaging levels.

According to requirements the user can choose between the Basic and the Plus printing solutions.

### Target group

TTE-Printing is suitable for all actors of the supply chain, who need a printing solution for either production processes with extensive print jobs or smaller order-related quantities.

### Prerequisites

- commercial standard PC with network connection
- minimum Microsoft Windows 7
- Zebra printer or compatible model

## Functional scope

- adding, removing or editing articles
- determining the packaging structure with automatic assignment of the single items to the higher packaging level
- adding article specific data, as e.g. the NEM, the application date, the production date etc.
- independent creation of standardized data matrix codes and the unique serial numbers
- creation of FEEM compliant XML data from existing data for hand over to the client
- preset of standard layouts for labels of each packaging level
- creation of user specific layouts
- creation of reports as attachment to the delivery notes
- creation of additional reports and statistics
- prevention of repeated serial numbers

## Advantages

- controlling the compliance with the legislation
- user friendly and fast realization of the printing process
- simple reprint of labels
- multilingualism
- simplifying every day activities by additional options
